

General Description

This demonstration board utilizes the AL9910 high voltage PWM LED driver-controller providing a cost effective solution for offline high brightness LED applications that do not require triac dimming. This user-friendly evaluation board provides users with quick connection to their different types LEDs string. The demonstration board can be modified to adjust the LED output current and the number of series connected LEDs that are driven.

A bill of materials is included that describes the parts used on this demonstration board. A schematic and layout have also been included along with measured performance characteristics. These materials can be used as a reference design for your products improving your product's time to market.

Key Features

- Selectable 2W-6W output power
- Active PFC with power factor (~0.7)
- No electrolytic capacitor or selection for low output ripple

Applications

- Retrofit E12, E27, PAR3x bulb applications

Specifications

Parameter	Value
AC Input Voltage	190V – 240V
Output Power	2W – 6W
LED Current	130mA
LED Voltage	30V
Efficiency	> 81%
Power Factor	~0.7
Output Ripple	<40% (p-p)
XY Dimension	1.155" x 0.590"
ROHS Compliance	Yes

Top-View Evaluation Board

Bottom-View Evaluation Board

Connection Instructions:

- AC+ Input: Red – Hot
- AC- Input: Black – Neutral
- DC LED+ Output: LD+ (Red)
- DC LED- Output: LD- (Black)

Board Layout

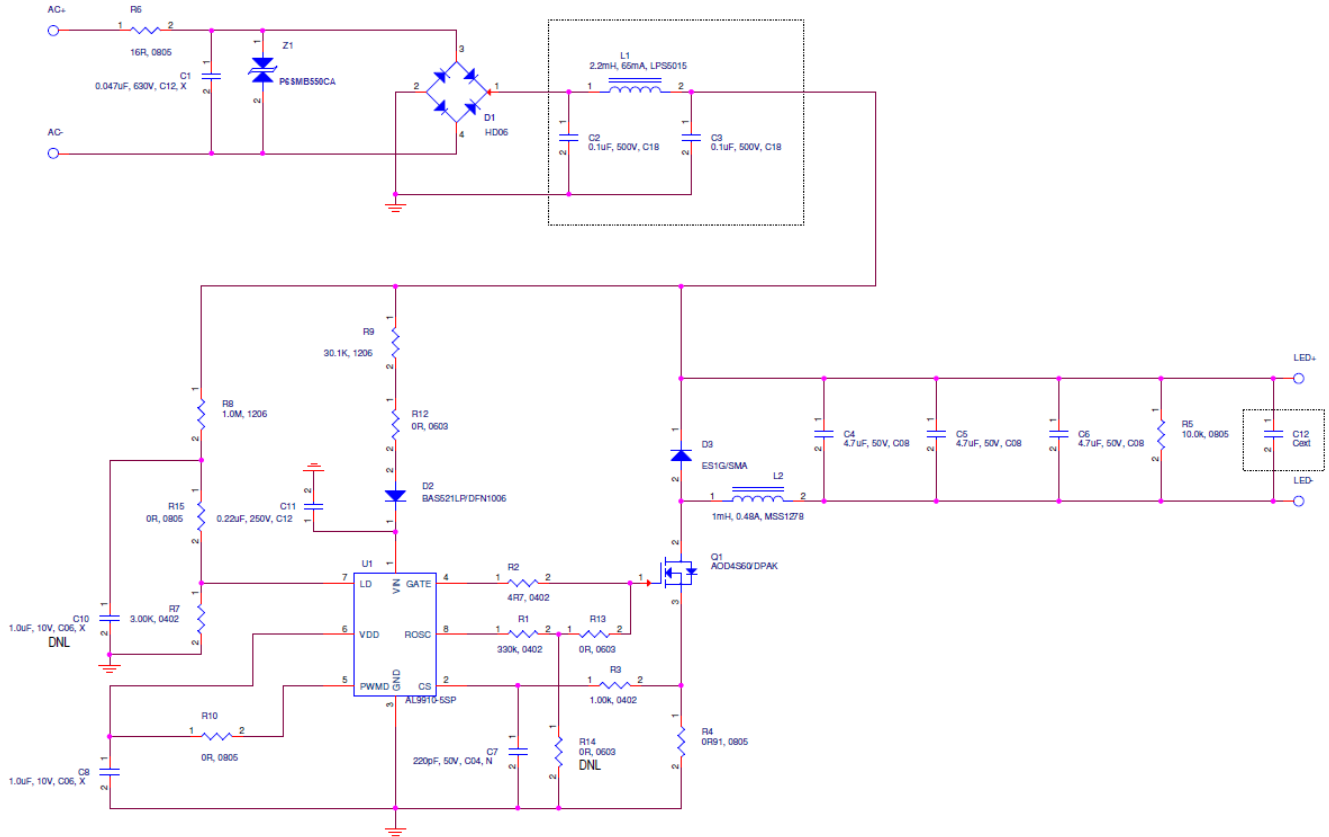

Evaluation Board Connection Setup and Power-up Procedure

1. Preset the isolated AC source to 230V_{AC}.
2. Ensure that the AC source is switched OFF or disconnected.
3. Connect the anode wire of the LED string to LD+ of the evaluation board.
4. Connect the cathode wire of the LED string to LD- terminal of the evaluation board.
5. Connect two AC line wires to the AC+ and AC- terminals on the evaluation board.
6. Ensure that the area around the board is clear and safe, and preferably that the board and LEDs are enclosed in a transparent safety cover.
7. Turn on the main switch. LED string should light up with LED.
DO NOT TOUCH THE BOARD, LEDs OR BARE WIRING.

Caution: The AL9910EV10.230 is a non-isolated design. All terminals carry high voltage during operation!

Diodes Incorporated and its subsidiaries reserve the right to make modifications, enhancements, improvements, corrections or other changes without further notice to this document and any product described herein. Diodes Incorporated does not assume any liability arising out of the application or use of this document or any product described herein; neither does Diodes Incorporated convey any license under its patent or trademark rights, nor the rights of others. Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel.

Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

- A. Life support devices or systems are devices or systems which:
 - 1. are intended to implant into the body, or
 - 2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
- B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
